

QuickShip SQL Assignment - Scenario Based Practice

Scenario: QuickShip is a logistics company operating across multiple cities. You are hired as a Database Analyst and must solve business problems using SQL.

Tables:

1. customers(customer_id, customer_name, city, signup_date)
2. drivers(driver_id, driver_name, city, joining_date)
3. warehouses(warehouse_id, warehouse_name, city)
4. orders(order_id, customer_id, warehouse_id, order_date, order_value)
5. deliveries(delivery_id, order_id, driver_id, delivery_date, delivery_time_hours, status)

Assignment Questions

Q1. Find all customers who registered in 2024.
