

SQL Assignment Sheet

This assignment focuses on practicing SQL basics, joins, and subqueries.

Schema:

```
CREATE TABLE Employees (  
    emp_id INT PRIMARY KEY,  
    name VARCHAR(50),  
    salary INT,  
    dept_id INT,  
    manager_id INT  
);  
  
CREATE TABLE Departments (  
    dept_id INT PRIMARY KEY,  
    dept_name VARCHAR(50)  
);  
  
CREATE TABLE Orders (  
    order_id INT PRIMARY KEY,  
    emp_id INT,  
    order_amount INT,  
    order_date DATE  
);
```

Sample Data:

```
INSERT INTO Departments VALUES  
(1, 'IT'),  
(2, 'HR');  
  
INSERT INTO Employees VALUES  
(101, 'Amit', 50000, 1, NULL),  
(102, 'Neha', 60000, 1, 101),  
(103, 'Raj', 45000, 2, NULL),  
(104, 'Priya', 70000, 2, 103);  
  
INSERT INTO Orders VALUES  
(201, 101, 500, '2023-10-01'),  
(202, 102, 1500, '2023-10-02'),  
(203, 101, 700, '2023-10-03');
```

Questions:

1. List all employees with salary greater than 50000.
2. Show employee names with their department names.
3. Find total salary per department.
4. List all orders with employee names.
5. Find employees earning more than average salary.
6. Find employees working in the same department as 'Neha'.
7. Find second highest salary.

8. List employees who have no manager.
9. Find employees earning more than their department average salary.
10. Get highest salary employee in each department.
11. Find employees who joined before their manager (assume order_date as reference).
12. Find employee who handled highest total order amount.
13. Get latest order for each employee.
14. Find employees with duplicate salaries.
15. Get top 2 highest paid employees.
